**RE: Water and Sewer System
Approved Vendors**

The City Council recognizes that the Cedar Springs water and sewer systems are highly complex and extremely important systems that the entire population of City residents and business owners rely upon on a daily basis. It is the policy of the Cedar Springs City Council that only approved contractors shall be permitted to conduct work that touches upon or impacts either the City's water system or sewer system. This policy explicitly extends to all work or development in the City, including projects being proposed by private businesses and individuals. All such work shall be performed by one of the approved vendors on this list or a subsequent list approved of by the City Council. The contractors on the approved vendor list shall be chosen based upon their proven skill and ability to perform the necessary work, their experience in performing such work and their familiarity with the Cedar Springs water and sewer systems.

The approved vendor list shall include:

-
